VIASAT AT LOCAL POLICE AND URBAN SECURITY DAYS: MANY NEW FEATURES FOR THE STREET CONTROL SUITE

Viasat will be present, from 15 to 17 September, at the 41st edition of 'The days of local police and urban security, an important international conference, and exhibition of technologies, solutions, and services dedicated to the sector. At the event, which will be held at the Palazzo dei Congressi in Riccione, the focus will be on the contrast between degradation and illegality, road safety and environmental protection, operating methods, and new devices for territorial control.

This will be an important chance for Viasat (Stand no. 15) to promote the Street Control, Street Parking, and Urban Security suite as an innovative tool to support Public Administrations and the Police Force in the process of digitalization and road safety control, as demonstrated by the adoption by many Italian municipalities.

"To keep up with the expectations of citizens and meet the growing needs of Public Administrations to effectively address the so-called digital transformation, also taking up the challenge of PNRR, we are working on new innovative solutions that can facilitate this transition", explains Valerio Gridelli, AD BU Smart Connect by Viasat. "It is no coincidence that this event will be an opportunity to discuss with industry operators and local police new tools that could enrich our suite in the management, for example, of the payment of fines, through PagoPa and a simple QR code, quickly and easily, all via app and in a few clicks".

An approach that aims to offer innovative tools to operate more efficiently and effectively on the territory. The **Street Control, Street Parking, and Urban Security** suite represents a fundamental element for achieving these integration objectives for the various stakeholders: **local authorities, the various law enforcement agencies, and, above all, citizens.**

The solution is characterized by ease of use with a high definition camera and a high reading capacity of the license plates of moving or stationary vehicles (until 100 per second), through the aid of an App on a Smartphone or Tablet PC. **In particular, the Viasat system allows a real-time verification of insurance regularity, counteracting the phenomenon of vehicles traveling without insurance, road tax, and inspection, stolen vehicles, evasion of parking payments and geo-referenced reports, relating to urban decay and maintenance.**

Therefore, a single platform from a smart city perspective, based on Cloud infrastructure, for the safety of the territory and citizens on which Viasat is working to enrich it with new useful features, also with a view to protecting the environment, such as pollution monitoring. (air quality, chemical and industrial process control, forest fire prevention) and indoor detection of substances hazardous to health.

Who is Viasat. Viasat (www.viasatonline.it) is a European excellence in satellite security systems that integrate the most modern telematic and IoT technologies to guarantee complete safety for the vehicle and its occupants on the market for Satellite Anti-theft systems, Insurance Telematics, Fleet Management and Big Data.
